

One-Page Runway Memo

\$150,000 budgeted to support approximately 9 months of execution

Summary

This capital plan is structured to turn early product momentum into commercial proof. It funds the infrastructure needed to demonstrate real networking workflows, supports fast product iteration through AI-assisted development, and preserves enough operating flexibility to secure design partners, early customers, and a credible proof of concept for the broader agentic platform.

Use of Funds

Category	Amount	Why it matters
Hardware: networking gear + Mac computers	\$50,000	Creates a real lab environment and supports credible demos, testing, and technical proof.
Summer stipend	\$5,000	Supports sustained founder/operator execution during the core build period.
Claude Code / AI coding credits	\$12,000	Increases development throughput and reduces iteration time.
Cloud / software / hosting	\$18,000	Supports reliable delivery, testing, infrastructure, and product demos.
Customer development / travel / pilots	\$10,000	Funds university outreach, design partner cultivation, and pilot execution.
Contractor / specialist support	\$15,000	Adds targeted expertise without increasing fixed headcount burden.
Operating buffer / contingency	\$40,000	Preserves runway flexibility and reduces execution risk.

Runway Math

\$150,000 over approximately 9 months implies a blended monthly capacity of about \$16,667. Excluding the front-loaded hardware allocation, the remaining \$100,000 provides about \$11,111 per month of operating capacity.

Target Outcomes

- Entry-tier design partners, especially universities
- A few higher-value design partners
- A few early customers or paid pilots
- Proof of concept for the broader agentic platform

Investor Takeaway

This is a disciplined early-stage budget: enough hardware to make the product credible, enough tooling to move quickly, and enough operating flexibility to convert technical execution into market validation. The intended result is not just product progress, but a stronger financing narrative anchored in technical proof, customer signal, and platform upside.
